

Sustainable Energy Forum

2013 SEF Seminar

Towards 100% renewable urban transport

It is increasingly clear that New Zealand needs to cut down transport emissions, for climate-change, cost, supply-risk, safety and pollution reasons. At present we are heading in the opposite direction. This seminar will put up some ideas for change.

Who: Eric Martinot, an internationally recognized writer, educator and speaker on renewable energy. He is now based in Japan, and travels to New Zealand each year to give a post-graduate course at Victoria University, and was lead author and research director of the global status report, REN21, on the status of renewable energy worldwide.

Plus: brief comments from -

Paul Young, Generation Zero, on why young people are campaigning for a zero carbon goal - low carbon transport options, efficient public transport and safe cycleway networks.

Doug Clover on his research on NZ attitudes towards electric vehicles

When: Thursday 22 August,
12.30 pm - 2.00 pm

Where: Sustainability Trust,
Forrester's Lane, Wellington.

The SEF Annual General Meeting will follow at 2:15, same location
